About me:

My workstyle is collaborative. Deploying new technologies in business environments, adding value, and creating trusting relationships with technology partners and final customers. Over my 13+ years of experience working in Latin America, I have had the opportunity to work closely with public and private customers, channel partners and cloud-based cybersecurity top vendors.

My technical background has been shaped from supporting and managing security IT platforms/networking, to ultimately being involved the latest years with migrating workloads to public cloud for customers, contributing as an expert consultant with a persuasive approach and being able to deploy top cybersecurity technologies in public cloud environments.

Likewise, I have been expanding my abilities towards the public cloud world in different areas, as computing, services, automatization, and security. I recognize the dynamics and current technology challenges of digital transformation in organizations and within the business chain. By this way, I have undertaken successful projects, achieved goals, and been continuously improving in my personal and team performance.

Education:

Master of Information Security.

Universidad de Buenos Aires, Argentina. June 2014.

Electronic Engineer

Universidad del Norte, Colombia. March 2008.
